

REALTIME DUTY MONITORING

KEY FEATURES

Realtime duty monitoring

Revenue management

Operations management

Driver duty allocation

ABOUT VIX-QUESTEK

Vix-Questek is South Africa's leading provider of solutions for public transport, with over 25 years' experience in the Sub-Saharan market. Based in Johannesburg, Vix-Questek provides solutions for Automated Fare Collection, fleet management, fare evasion and passenger counting solutions.

Along with this Vix-Questek has an extensive support and maintenance organisation in place to support their customers in the field.

OVERVIEW

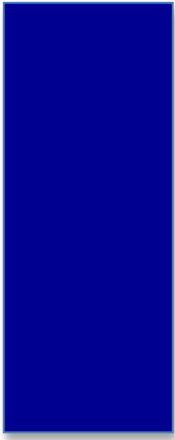

Operations control is the most critical part of any passenger transport system. Until recently, operators lacked a centralised and cohesive management and control solution. From controlling the dispatch of vehicles and their drivers from depots and terminals to regulating routes, there is a need for drivers need to conform, Questek's fully integrated, centralised, secure, web-enabled platform facilitates realtime management, monitoring, control and analysis of the fleet and operates hand-in-hand and complements Questek's existing revenue management solutions.

A live and dynamic dashboard gives the operator realtime information that ensures regulation compliance, productivity and efficiency, service quality as well as service integrity and mobility.

So now you can monitor the dispatch process in realtime and ensure compliance to the schedule and immediately act upon buses that don't follow planned schedule and routes, loss of revenue, driver behaviour and performance, vehicle maintenance and much more.
